

FedRAMP Advisory and 3PAO Services

Reduce compliance expenditures and expedite authorization process

FedRAMP is a U.S. government-wide program that delivers a standard approach to the security assessment, authorization, and continuous monitoring of cloud products and services. Compliance is mandatory for all Cloud Service Providers (CSPs) that hold federal data and are providing or seeking to provide services to federal agencies.

HOW WCG CAN HELP

WCG provides the following services to ensure that your organization achieves and maintains your FedRAMP Authority to Operate (ATO):

Consulting and Documentation Assistance

We provide consulting services throughout the FedRAMP process and assists you with Security Artifact Creation such as Security Assessment Plan (SAP), System Security Plan (SSP), Security Assessment Report (SAR), and Plan of Action and Milestone (POA&M) to get you prepared for your upcoming FedRAMP assessment and authorization.

We also provide the following as part of our consulting services:

- Assist you to determine your cloud solution's proper FIPS-199 categorization of the risk level.
- Conduct Vulnerability Assessment and Penetration Testing.
- Conduct gap analysis to evaluate the sufficiency of security controls.
- Evaluate, review and revise your Incident Response Plan, Process, and Procedures to ensure it sufficiency.

FedRAMP Readiness Assessment

We review your environment and conduct a technical capability assessment to determine if it meets FedRAMP security requirements which results in a FedRAMP Readiness Assessment Report (RAR).

In order to kick off the authorization process with the Joint Authorization Board (JAB), CSPs must achieve the FedRAMP Ready JAB designation for their Cloud Service Offering (CSO).

Full Security Assessment

We perform an independent assessment of the system to evaluate critical control implementation and verify your compliance level to FedRAMP. A **3PAO-required Security Authorization Package** will be developed that contains SAP, SAR, and POA&M.

This full security assessment ensures compliance with NIST SP 800-53 Revision 4 or 5 and FedRAMP controls for low, moderate, or high-impact cloud organizations' products and/or services.

Continuous Monitoring

We provide ongoing support with risk evaluation to maintain your organization's FedRAMP ATO by monitoring the following:

- Perform an assessment on an annual basis for a subset of the overall controls implemented on the system to ensure your organization's operational visibility.
- Test the new control for the entire system to determine if a significant change involves a new control implementation. If the significant change is a new technology, we will evaluate its integration into existing controls to maintain continuous compliance.

WHY CHOOSE WCG

80%

time saving to get you ready for the authorization.

40%

cost saving (at least) compared to others' pricing and approach.

>10

valuable experience working with federal agencies such as **DHS, DoD, and State Department.**

Rev.5

tool, knowledge, and experience to facilitate expeditious Rev 5 controls assessment.

Get ready for your FedRAMP compliance today.

Wilson Consulting Group (WCG) is an innovative global cybersecurity consulting firm headquartered in Washington D.C., with a European office in London, England. We specialize in IT governance, risk management, and compliance consulting services, providing our clients with strategic guidance, technical solutions, and business advice to best serve their individual needs. WCG is an accredited FedRAMP 3PAO authorized by the U.S. General Services Administration (GSA) to conduct security assessments for CSPs seeking FedRAMP Ready and FedRAMP Provisional/Agency Authorizations.
